The Integrated LIFE Project for the Natura 2000 network, called *One Nature*, contributes to the conservation of biodiversity and the promotion of ecosystem services in the protected areas of the Natura 2000 network in the Czech Republic. Thanks to more efficient management planning, research and using its results in practice and also thanks to a good cooperation with land owners and land users located in protected areas, the project helps to ensure the most suitable management and, above all, to preserve these valuable sites for the benefit of nature and people in the future.

Thanks to the project budget of almost CZK 500 million, where 60 percent is funded by the European Union through the LIFE Programme, a more efficient system of Natura 2000 sites management will be put in place.

Appropriate management depends on planning based on the assessment of the target feature' status development. It is grounded on cooperation with land owners and land users of the protected areas and it effectively uses the new knowledge of the benefits that the natural capital of these sites provides to society and of the costs related to the site management.

**Project partners:**

- » Ministry of the Environment of the Czech Republic
- » Nature Conservation Agency of the Czech Republic
- » Charles University Environment Centre, Global
- » Change Research Institute of the CAS (CzechGlobe)
- » Biology Centre of the CAS, Soil & Water Research Infrastructure.
